Position: FPGA System Engineer

NOFFZ Technologies is a global development service provider and system integrator. We realize products and electronic components as well as turnkey and innovative measurement and automation systems. We are an owner-managed family business with a successful, 30-year company history and on course for international growth.

Your responsibilities:

▶ As a part of our local team in Serbia, you will work on development of FPGA-based custom measurement systems with application in automotive industry.

▶ You will be involved in projects such as:
- development of radar signal analysis algorithms and their deployment on the FPGA,
- development of test systems for emerging automotive camera and display protocols (GMSL, FPD-Link)
- implementation of test framework systems for various reserach applications in mmWave domain

We offer:

▶ Challenging projects with cutting edge technologies

▶ A pleasant working atmosphere where family culture and respect are core values

▶ Continuous technical and professional training

▶ International work environment with possibilities to travel

▶ Atractive compensation package including private health insurance, sport activities and home office flexibility

Your qualifications:

▶ BsC or MsC in Electrical Engineering

▶ 2+ years of experience in working with FPGA technology and software tools (VHDL, Verilog, Xilinx Vivado, LabVIEW FPGA...)

▶ Solid software development skills

▶ Good knowledge of English language
