Abstract

Engineering Group is the leading Italian software and services company, with more than 7,300 employees and 40 branch offices in Italy, Belgium, Brazil, Argentina, USA and in the Republic of Serbia, where it operates through its subsidiary MHT Balkan. Founded in 1980, the company has steadily grown by integrating assets and customers' technical and functional requirements, developing effective user-oriented solutions. The rapid and continuous evolution of technologies and of the ICT service delivery model, have been faced by Engineering Group through an Open Innovation approach that creates "new value".

The presentation is intended to explain how the Technical, Innovation and Research Division operates at the international level, actively contributing to the growth of the Group, as well as of the entire ecosystem to which it belongs. In detail, the presentation includes some use cases based on open source solutions, involving the SpagoBI Labs and the Engineering's Software Labs – two entities that recently opened a new development office in Belgrade.
